

Prove your skills and win this tablet!

Isothermal Titration Calorimetry Data Analysis Contest.

Take the challenge. Fit isotherms with the new AFFINImeter software and win a Kindle Fire HD7.

The analysis of Isothermal Titration Calorimetry experiments might be a tough work without the right tools. Using AFFINImeter, performing a robust data fitting is only a matter of a few minutes even in the most difficult cases where multiple species are in equilibrium with each other and no information is available on the value of the corresponding equilibrium constants and enthalpies. The AFFINImeter team has released the **ITC Data Analysis Contest**. A few funny ITC

isotherms are available here together with some tips to guide you in their analysis. Just for participating in this challenge you will get a **3 months free licence of AFFINImeter**. After those three months you will be able to continue using most of the functionalities offered by AFFINImeter: our powerful model builder and the simulation of ITC isotherms. The **WINNER** of this challenge will receive a Kindle Fire 7" HD tablet. You have until 20th December 2014 GMT+1 to register and participate. **Would you accept the challenge?**
